Resumen del Contenido

API Routes Improvements ■

Date: 2025-01-27

Status: ■ Completed

Summary

Comprehensive improvements to all API route files, including type hints, enhanced docstrings, import organization, and code consistency.

Improvements Made

1. Fixed Import Issues ■

- ■ **Removed duplicate import** of `MemoryService`` (was imported twice)
- ■ **Added missing import** of `verify_api_key_optional`` from ``api.auth``
- ■ **Removed unused imports**: ``rate_limit_dependency``, ``create_auth_dependency``, ``format_response``
- ■ **Organized imports** consistently (standard library → third-party → local)

Before:

```
from services import MemoryService
```

... other imports ...

```
from services import MemoryService # Duplicate!
```

Missing: `verify_api_key_optional`

After:

```
from fastapi import APIRouter, HTTPException, Depends, Request
from pydantic import BaseModel, Field
from typing import Any, Dict, List, Optional
```

```

from api.dependencies import get_memory_service
from api.models import ...
from api.auth import verify_api_key_optional
from api.api_utils import ...
from services import MemoryService

```

2. Enhanced Type Hints ■

Added return type hints to all route functions:

```

| File | Functions Improved |
|-----|-----|
| `memory.py` | `store_episode()`, `retrieve_episodes()`,  
`get_stats()` |
| `redundancy.py` | `process_redundancy()`, `get_stats()` |
| `pipeline.py` | `process_pipeline()`, `get_stats()` |
| `chat.py` | `chat()` |
| `config.py` | `get_config()` |
| `monitoring.py` | `get_status()`, `get_health()` |

```

Example:

Before

```

async def store_episode(...):
    """Store episode in memory."""

```

After

```

async def store_episode(...) -> MemoryStoreResponse:
    """

```

Store episode in memory.

Args:

request: Memory store request with episode data

req: FastAPI request object

service: Memory service instance

_auth: Optional API key for authentication

Returns:

MemoryStoreResponse with storage status and episode count

Raises:

HTTPException: If memory module is unavailable or validation fails

.....

3. *Enhanced Docstrings* ■

All route functions now have comprehensive docstrings with:

- ■ ****Args section****: Clear parameter descriptions
- ■ ****Returns section****: Return value description
- ■ ****Raises section****: Exception documentation

****Total functions improved****: 13 route functions across 6 files

4. *Code Consistency* ■

- ■ ****Consistent import organization****: Standard library → third-party → local
- ■ ****Consistent docstring format****: All follow same structure
- ■ ****Consistent type hints****: All route functions have return types
- ■ ****Consistent error handling****: All use same pattern
